			Checkpoints dropped from scoring:																																		
			10 failed to trigger for most cars, Google Maps shows it's location in the center of the traffic lane about 1/2 car length past the landmark we used for the checkpoint.																																		
			14 triggered early because it was not accounted for during the re-route for construction on Leonard, my mistake.																																		
			34 failed to trigger for all cars, the location of the checkpoint was in the woods to the left of the course, my mistake.																																		
			11 failed to trigger only for the car 4, while I am sure they went by the checkpoint, their score for this checkpoint is their average checkpoint score for the day
